

Customer Journey Map

Phase of Journey	Stage 1: Onboarding & Input	Stage 2: Processing & Inference	Stage 3: Recommendation & Reflection
Actions <i>What does the customer do?</i>	Opens the web app and types out their current academic frustration or feelings into a text box.	Waits briefly while the background pipeline runs the inputs through the system models.	Views their classification results, interacts with behavioral analytics, and reads generated advice.
Touchpoint <i>What part of the service do they interact with?</i>	Streamlit web interface form submission box.	Minimalist dynamic loading spinner or progress bar.	Interactive Streamlit output text blocks and Plotly chart dashboards.
Customer Thought <i>What is the customer thinking?</i>	"Will this machine actually understand how stressed I am about my code/exams?"	"I hope this doesn't take forever to load; my brain is already completely fried."	"Wow, this advice is surprisingly accurate. Seeing my stress trends visualized helps."

Customer Feeling <i>What is the customer feeling?</i>	Overwhelmed, skeptical, anxious.	Anxious, but expectant.	Relieved, validated, slightly motivated to restart.

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Process Ownership <i>Who is in the lead on this?</i>	Solo Developer (Udeep) — Frontend Engineering	Solo Developer (Udeep) — AI & Backend Engineering	Solo Developer (Udeep) — Data Visualization & Evaluation
Opportunities <i>How can we improve this stage?</i>	• Add quick-click emotional phrase tags for faster entry during high burnout moments.	• Pre-warm model cache or implement asynchronous scheduling to lower response latencies.	• Integrate historical progression tracking so users can review emotional trends over a month.
