

Project Executable Files

Date	7 July 2026
Team ID	xxxxxx
Project Name	Emotion Detection & Learning Support Engine
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes (<i>Schema is built inside database.py</i>)
5	Environment configuration file or (.env.example similar)	Yes

6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

/emotionDetectionLearningSupportEngine
├── README.md          (Detailed setup and run instructions)
├── /documentation     (All project planning and evaluation PDFs)
├── /video demo        (Screen recordings and demo assets)
├── /project files (Application Source Code)
│   ├── .env           (Stores the Google Gemini API Key securely)
│   ├── app.py         (Main Streamlit UI application and dashboards)
│   ├── auth.py        (User authentication system - Login/Signup via bcrypt)
│   ├── database.py     (SQLite DB schema, queries, and history logging)
│   ├── performance_test.py (Concurrent load testing script)
│   ├── predict.py      (BiLSTM & BERT Emotion Prediction logic)
│   └── requirements.txt (Python dependencies - Streamlit, TensorFlow, etc.)
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	N/A (Configured for Local Development Environment)
Login Credentials (Demo)	Username: testuser Password: password123 (Or any account you create on the signup page)
Platform / Hosting Provider	N/A (Tested on Windows Localhost)
Repository Link	https://github.com/UdeepChowdary/emotionDetectionLearningSupportEngine

Demo Video Link	https://drive.google.com/drive/folders/1PzUoGEjt2xHoXqUhRdBYTDsmVob2_m9C?usp=sharing
------------------------	---

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites: Python 3.9+, pip, and a Google Gemini API Key.

- **Step 1:** Clone The Repository: *git clone <https://github.com/UdeepChowdary/emotionDetectionLearningSupportEngine.git>*
- **Step 2:** Navigate to the folder: `cd "project files"`
- **Step 3:** Install dependencies: `pip install -r requirements.txt`
- **Step 4:** Configure environment:
Create a file named `.env` and add: `GEMINI_API_KEY=your_key_here`
- **Step 5:** Start the application: `python -m streamlit run app.py`
- **Step 6:** Open browser at `http://localhost:8501`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Google Gemini API Rate Limit	Implemented try-except blocks to catch API quota limits gracefully without crashing the server.
2	Initial Deep Learning Model Load Time	Implemented <code>@st.cache_resource</code> so the heavy TensorFlow models load into memory only once upon startup.
3	Web app resets state on refresh	Normal Streamlit behavior; we fixed this by securely saving interaction history into the SQLite database.
