

Project Demo Planning

Date	8 July 2026
Team ID	XXXXXX
Project Name	Emotion Detection & Learning Support Engine
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem	Briefly explain the lack of emotional intelligence in modern e-learning and why students need empathetic AI coaching.	1	Self
2	Architecture Overview	Display the Technical Flowchart and ER Diagram. Explain the 3-tier architecture (Streamlit, Local DL Models, Gemini API).	1	Self
3	UI & Authentication	Screen-share the live app. Demonstrate the secure User Signup/Login process and explain the bcrypt hashing.	1	Self
4	Core Live Demo	Input a sample text (e.g., a "Frustrated" math student). Show the BiLSTM detecting the emotion and Gemini generating the response.	2	Self
5	Analytics Dashboard	Navigate to the user history tab. Show the Plotly charts updating dynamically based on the SQLite database records.	1	Self
6	Conclusion & Future Scope	Wrap up the presentation. Mention future goals like multi-language support or cloud deployment (AWS/Heroku).	1	Self

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Hook the audience with a relatable scenario (e.g., student burnout). Clearly state the project's core objective to bridge mental well-being and education.
2	Solution Overview	Keep this technical but high-level. Highlight the decision to use a hybrid model: local TensorFlow (BiLSTM/BERT) for privacy/speed, and external Gemini API for high-quality text generation.

3	Live Feature Demonstration	Ensure the local Streamlit server is running perfectly before starting. Have 2-3 prepared text prompts (e.g., one frustrated, one confident) ready to paste in to ensure a smooth, error-free live demo.
4	Q&A Session	Be prepared to answer technical questions regarding: Model Accuracy, Gemini API latency/rate limits, and why SQLite was chosen over heavier databases like PostgreSQL.
